PROJECTS

The Picard Maneuver - A tactical starship combat game | (*JavaScript, Canvas, npm*)

[live](#) | [github](#)

- Used Object Oriented Programming and inheritance to make the code dry, polymorphic, and scalable as new features are added.
- Utilized trigonometric functions such as Math.atan and Math.PI to find the angles and rotation of objects.
- Organized dependencies with Node Package Manager and JavaScript classes with Webpack.
- Added requestAnimationFrame() to improve user experience by making game animations smoother.

Multiple-player Go Group Project | (*React/Redux, Express, Axios, MongoDB, Node, Websockets*)

[live](#) | [github](#)

- Implemented a recursive dfs algorithm to build groups of connected game pieces to accomplish capture logic.
- Built a game server where multiple players can connect, play games of Go and chat, passing information through websockets to synchronize.
- Designed the Axios calls and backend routes for game data to be stored in the Mongo database.

Fullstack TaskRabbit Clone | (*React/Redux, Rails 5, Ajax, Postgres, AWS*)

[live](#) | [github](#)

- Utilized React frontend to implement a single-page app to improve user experience by making the loading of multiple pages unnecessary.
- Created a user authentication system utilizing BCrypt to protect user information by storing salted and hashed password digests.
- Designed a CRUD (Create, Read, Update, and Destroy) system for users to create and add tasks to the database.
